

Deploying & Managing AVS

Accelerate cloud migration
and innovation

Kevin Jellow – AVS GBB

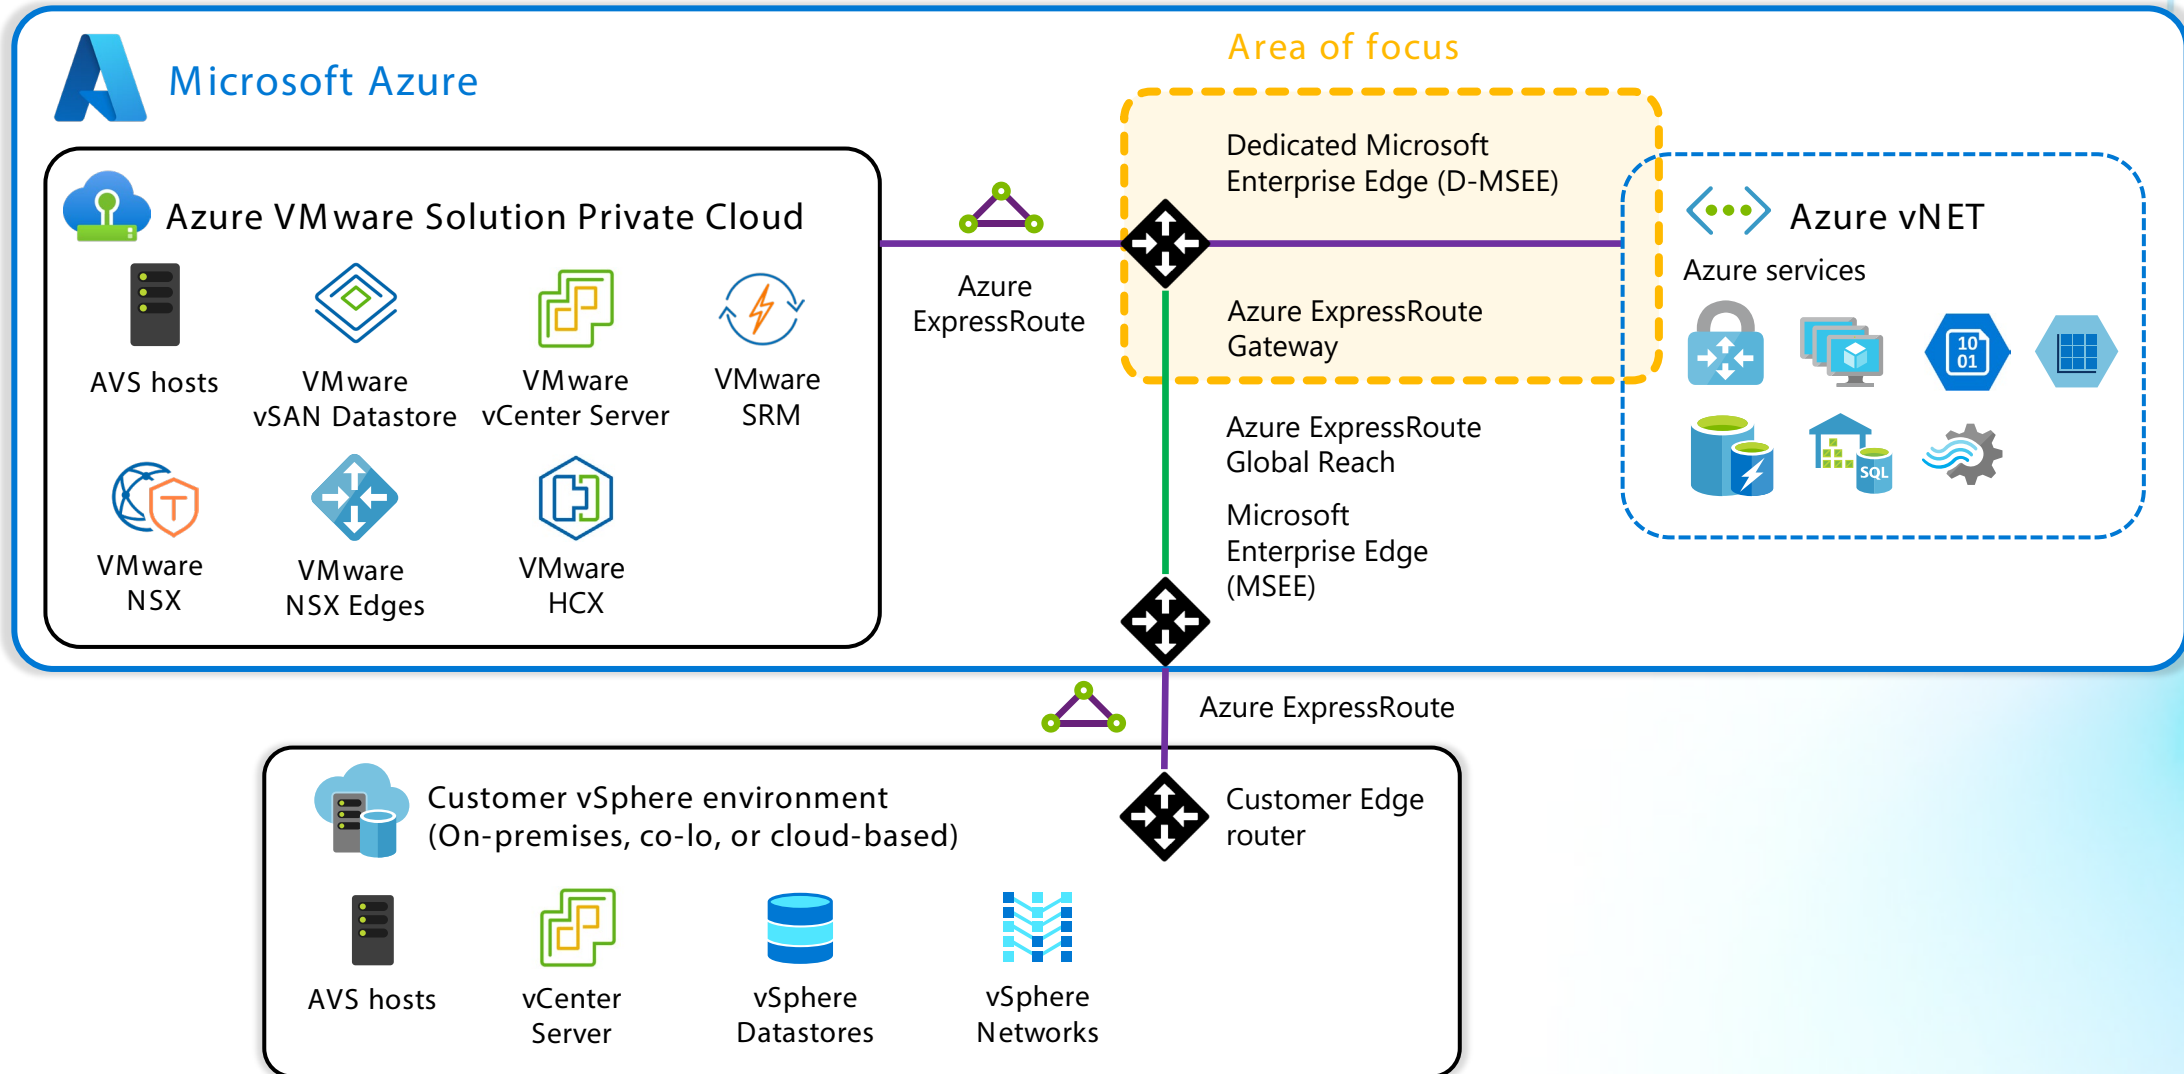

Connectivity with Azure overview

Standard network topology for Azure VMware Solution

Connecting to Azure services

Deployment

Efficiently migrate while maintaining operational consistency

Leverage existing VMware skills while developing Azure competencies

1

Plan migration

Identify workloads suited for migration.

2

Provision AVS

Set up Azure VMware Solution (AVS) in Azure with landing zone accelerator.

3

Connect to AVS

Connect to on-premises environment via Azure ExpressRoute.

4

Rehost workloads

VMware HCX provides migration capabilities for AVS.

5

Attach Azure services

Modernize workloads by integrating with 200+ Azure services.

Rehost

Modernize

Planning for Azure VMware Solution

Azure novice

Migrate VMware workloads “as-is” with minimal refactoring.

Continue to leverage existing VMware expertise while gaining Azure skills.

Recommendations

Deploy Azure VMware Solution

8 things you
need first

Microsoft Azure

Home > Azure VMware Solution >

Create a private cloud ...

Prerequisites * Basics Tags Review and Create

Project details

Subscription * ⓘ Azure TPM AVS Enterprise Solutions Lab

Resource group * ⓘ vmware-explore-rg-01
[Create new](#)

Private cloud details

Resource name * ⓘ vmware-explore-sddc-01 ✓

Location * ⓘ (US) East US ← 33 locations available

Size of host * ⓘ AV64 node ← AV36P, AV52 SKUs available AV64 currently only for Mixed-SKU Add Cluster

Host location * ⓘ

☒ All hosts in one availability zone
☐ Hosts in two availability zones
Hosts will be equally divided across 2 availability zones. Since there will be two availability zones, the number of hosts you can select are in multiples of 2 only.

← Quota DOES NOT guarantee you will be able to provision a host

[Find out how many hosts you need](#)
[If you need more hosts, request a quota increase](#)

\$18,057.60
estimated monthly total

CIDR address block

Provide IP address for private cloud for cluster management. Make sure these are unique and do not overlap with any other Azure vnets or on-premise networks.

Address block for private cloud * ⓘ 10.97.0.0/22 ← Need /22 RFC1918 network

- i** The address block must fall within the following allowed network blocks: 10.0.0.0/8, 172.16.0.0/12, 192.168.0.0/16
- i** The address block cannot overlap any of the following restricted network blocks: 172.17.0.0/16
- i** The address block cannot be smaller than a /22 network.

Your SDDC

Azure portal with SDDC deployed

The screenshot shows the Azure portal interface for a VMware Solution private cloud. The left sidebar contains navigation options: Overview, Activity log, Access control (IAM), Tags, Diagnose and solve problems, Settings (Locks), and Manage (Connectivity, Clusters, Encryption, VMware credentials, Identity, Storage, Placement policies, Add-ons, Workload networking). The main content area is titled 'vmware-explore-sddc-01' and shows the 'Essentials' section with the following details:

- Resource group: [vmware-explore-rg-01](#)
- Status: **Succeeded** (highlighted with a dashed orange box and labeled 'Status')
- Location: East US
- Subscription: [Azure TPM AVS Enterprise Solutions Lab](#)
- Subscription ID: [Redacted]

Below the Essentials section, there are links for 'Tags (edit)' and 'Add tags'. The 'Next steps in your VMware private cloud journey' section provides guidance on configuring networking, identities and roles, and monitoring.

On the right side, the 'Status' section lists the following configuration details:

- Address block for private cloud: 10.97.0.0/22
- Primary peering subnet: 10.97.0.232/30
- Secondary peering subnet: 10.97.0.236/30
- Private cloud management network: 10.97.0.0/26
- vMotion network: 10.97.1.128/25
- Number of hosts: **3 hosts across AZ1** (highlighted with a dashed orange box and labeled 'Multi-AZ stretched clusters indicator')
- Stretched cluster enabled: No

Annotations on the right side of the image include:

- 'Logical AZ (not physical AZ)' pointing to the '3 hosts across AZ1' value.
- 'Multi-AZ stretched clusters indicator' pointing to the '3 hosts across AZ1' value.

Migrate workloads with VMware HCX

- HCX provides true workload mobility.
- Large-scale bulk and live migration using HCX.
- Automatic conversion from legacy vSphere versions.
- No change in IP and support for stretched networks.
- Provides data encryption in transit.
- Supports both on-premises-to-cloud and cloud-to-cloud.
